

Activity 5 - To understand the difference between millilitres (ml) and litres (L).

Look at the pictures below and think about whether you would measure the capacity of the container in ml or L.

For example, I would measure the water in a bath using L but I would measure the liquid in a bowl in ml.

Put the containers in the table. Don't worry if you don't have a printer, you can just draw your own table and write/draw the containers into the table.

<u>Millilitres (ml)</u>	<u>Litres (L)</u>

Challenge - See if you can add your own containers.
